Summary of updates

The 2017–01 NMS Update includes a new section that focuses on removal and salvage of construction materials and forming a preliminary component to other selective demolition activities. It also covers updated sections related to deconstruction of structures, removal of construction materials, removal of underground storage tanks, conservation treatment of period masonry and stone, as well as sections for cast-in-place concrete, wood treatment and rough carpentry. As a significant enhancement to the data set, descriptions are now provided for each NMS section. The descriptions will help users find appropriate sections, and will be searchable on NRC’s website, and within some of the third party software tools.
